

# **SMA Data Manager M**

Full of Ideas. Full of Potential. Full of Energy.

#### Fast and easy to use

- Easy integration into new and existing systems
- Integrated inputs and outputs for digital and analog signals; no additional hardware required

#### Flexible and secure

- Option to connect up to 50 devices
- Enhanced cybersecurity
- Trusted platform module (TPM)
- Over-the-air updates

#### High performance

- More CPU power thanks to new processor
- Complies with international grid-integration requirements
- Combines energy generation, battery systems and e-mobility
- Energy management for battery systems

#### Reliable and practical

- Remote monitoring and parameterization possible
- Detailed analytics, error messages and reports through Sunny Portal powered by ennexOS

The SMA Data Manager M is the core element of decentralized commercial PV systems. Combined with Sunny Portal powered by ennexOS, it enables monitoring, management and grid-compliant power control at the point of interconnection.

A future-proof decision: The SMA Data Manager M supports up to 50 devices and provides inputs and outputs for digital and analog signals in order to ensure the necessary flexibility in meeting a wide range of different requirements. With a capacity of 2.5 MVA in closed-loop control mode or 7.5 MVA open-loop control mode and monitoring mode, the SMA Data Manager M is the ideal professional interface for electric utility companies, direct sellers, service technicians and PV system operators. Coordinated user interfaces and intuitive assistance functions simplify operation, parameterization and commissioning, making the SMA Data Manager M the preferred choice for PV application and installation.

# **SMA DATA MANAGER M**

## Professional monitoring and control for decentralized energy systems up to the megawatt range.

They are controlled through Sunny Portal powered by ennexOS, which enables the remote management of PV systems. You can manage multiple inverters with just one click, adjust parameters and monitor performance in real time. This saves time and minimizes costs. Centralized management for decentralized large-scale PV power plants is possible thanks to satellite-based data and cluster solutions with multiple data managers. Connectivity options include 2x Ethernet switched, 1x Ethernet, 2x RS-485 and Wi-Fi (for direct connection).

With expanded memory (e.g., for logging setpoint specifications) and remote-updates, the system is capable of responding flexibly to changing requirements.

### Benefits at a glance:

- Centralized management for decentralized large-scale
   PV power plants thanks to satellite-based data and cluster solutions with multiple data managers
- Remote parameterization saves time and money
- Different energy management profiles for battery storage systems
- Automatic monitoring of PV components thanks to SMA Smart Connected

Technical data	SMA DATA MANAGER M
Master data	
Total number of supported devices - of which:	50
Maximum number of supported PV inverters	50
Maximum number of supported PV inverters via Modbus Sunspec (e.g., Sunny Tripower CORE2)	50
Maximum number of supported battery inverters	50
Maximum number of supported charging points (EV Charger Business counts as 2 charging points)	50
Maximum number of supported energy meters (electric current and gas), generators from energy meters, I/O systems, sensors	50
Maximum nominal system power of PV inverters (nominal AC power)	2.5 MVA (closed-loop control)
Maximum nominal system power of battery inverters (nominal AC power)  Automatic data recording for virtual generators from energy meters (PV inverter, combined heat and	7.5 MVA (open-loop control or only monitoring)
power plant, gas meter, diesel generator, hydroelectric power plant)  Connections	
Voltage supply	2-pin connection, MINI COMBICON
RS485	2x 6-pole connection, MINI COMBICON
Network (LAN)	3x RJ45 (1x internet, 2x system network) 10BaseT/100Base
,	3x 1045 (1x illieriler, 2x system herwork) Tobaser/ Toobase
Wi-Fi access point for commissioning and access to the user interface  Additional connections	10x digital in, 1x fast stop, 5x multifunction relay (MFR), 4x analog in (0 mA to 20 mA), 4x analog out (0 mA to 20 m.
	2x temperature (PT100), 1x reset button
Voltage supply Voltage supply	External power supply unit lavailable as an accessory
•	External power supply unit (available as an accessory)
Input voltage	10 V to 30 V DC
Power consumption	Typically 8 W
Ambient conditions during operation	
Environment	Restricted class 3K7 reg. IEC60721-3-3
Ambient temperature	-20 °C to +60 °C
Permissible range for relative humidity (non-condensing)	5% to 95%
Maximum operating altitude above MSL	0 m to 3,000 m (≥70 kPa)
Degree of protection according to IEC 60529  General data	IP20 (NEMA 1)
Dimensions (W/H/D)	216 mm / 90 mm / 68 mm
Weight	372 g
Mounting location	Indoors
Mounting type	Top-hat rail mounting / wall mounting
Status display	LEDs for system and communication status
. ,	LEDS for system and communication status
Equipment	2
Warranty	2 years
Certificates and approvals (more available on request)  Accessories (optional)	www.SMA-Solar.com
Accessories (opinorial)	Phoenix Contact,
Top-hat rail power supply unit	input: 100 V AC to 240 V AC; output: 24 V DC / 2.5 A, SMA order number: CLCON-PWRSUPPLY
External IO system	ioLogik E1214 (6 DI/6 relay outputs), SMA order number: 124179-00.01
